

Level up Emotional Intelligence by battling AI personalities

The Problem

Emotional intelligence gap are holding people back in every area of life.

Poor Communication

leads to misunderstandings, broken relationships, and missed opportunities at work and home

Conflict & Wellbeing

Workplace conflicts and family misunderstandings drain productivity and damage personal wellbeing daily.

Unmanaged Stress

Emotional stress goes unmanaged — people lack safe spaces to practice difficult conversations.

No Accessible Tools

No accessible tools exist to train emotional intelligence in real-world, interactive scenarios.

AI Roleplay Arena: VR Edition

The Intersection of Immersive Gameplay, Pedagogy, and AI

The Core Gameplay Loop

The Boss Roster: MVP Lineup

Passive-Aggressive Coworker

Difficulty:

Level: 20

Patterns:

Skills Trained:

- Passive-Aggressive Coworker

Skills Trained:

- Defensive Parent
- Defensive Parent/Boss

Core Mechanic: The Tension Meter

VR AARON GAME: Dual-LLM Logic Engine

Call A (During Chat): In-Character Roleplay

Trigger: Fires every time player sends a message.

Payload: Persona System Prompt + Conversation History.

Output: 1-3 sentence in-character reply + tension_delta value.

Pace:
Synchronous, fast, game-like.

Call B (After Battle): Evaluation & Coaching

Trigger: Fires once, only after the battle concludes.

Payload: Coach System Prompt + Entire Conversation Transcript.

Output: Structured JSON containing EQ scores, quotes, and tips.

Pace:
Asynchronous, deep analysis.

Prompt Architecture: The Roleplay Persona

- Stay fully in character. Never break character or mention you are an AI.
- Keep replies short (1-3 sentences), realistic, and emotionally reactive.
- If player is harsh → become more defensive/sarcastic.
- If player is calm → gradually soften and cooperate.
- Track emotional trajectory — don't reset emotion each turn.

Alongside the reply, output a hidden `tension_delta` value (e.g., -2 to +2) to animate the frontend meter.

Evaluation JSON Structure (Backend)

```
{
  "name": "VieramI",
  "Itene": 305k,
  "kand": "лукки",

Full Stack Architecture Map

Frontend & UI (The Game)

Tech: HTML, CSS, JavaScript, Chart.js
Features: Arena screen, Real-time chat UI, Live Tension Meter animations, Radar growth charts.

Backend & Logic (The Engine)

Tech: Flask, Python
Features: Keeps API keys secure, manages conversation state and routing.

AI Engine (The Brain)

Tech: OpenAI API
Features: Handles both Roleplay (Call A) and Evaluation (Call B) prompts.

Data & Auth (The Memory)

Tech: MySQL
Features: Stores user progress, unlocked bosses, and historical battle scores.

Implementation Roadmap

Week 1: Core Chat Engine

- Set up backend endpoint (boss ID + history -> reply).
- Build basic chat UI (hardcode 1 boss for end-to-end flow).
- Get tension_delta JSON output working reliably.

Week 2: Game Layer

- Build Arena home screen (lock/unlock logic).
- Add Tension Meter animation.
- Add remaining 3 boss personas via system prompts.
- Implement evaluation call -> Report Card screen.

Week 3: Polish & Progression

- Firebase integration (save history, state, scores).
- Build the growth dashboard (radar charts).
- UI polish (optional sound/animations for 'wow factor').
- Test edge cases (rude players, short replies).

Evaluation Rubric Alignment

Visually Obvious AI Use

Faculty can watch the AI stay in character and react dynamically to live inputs.

Demonstrated Technical Depth

Showcases two distinct AI capabilities (creative roleplay + structured JSON evaluation) rather than a simple wrapper.

Justified Complexity

Game mechanics (unlocks, meters, report cards) make the UI naturally polished and purposeful.

1:1 Syllabus Mapping

The platform directly scores students on EI syllabus concepts: empathy, self-regulation, active listening, and clarity.

Future Scope: The Expansion Pack

Voice Battles

Speech-to-text input with AI reading boss lines aloud with tonal variation.

Dynamic Difficulty

Auto-adjustment based on a player's historical performance.

Multiplayer Mediation

Two real users practice mediating a conflict while the AI acts as the judge.

Classroom Mode

Teacher dashboard showing aggregated, anonymized class EQ growth stats.
